Automation Equipment for Today's Pharmacy

QEM Inc. designs and manufactures innovative and affordable pharmacy automation equipment that improves workflow and helps speed up production. QEM is a certified ISO 9001:2015 company, a family owned and operated, and headquartered in Largo, Florida.

Our sister company Pharmacy Automation Systems distributes a full line of automation systems to accommodate low and high volume pharmacies. PAS was established by QEM, Inc. to fulfill a need in the pharmacy industry.

We are pleased to be a USA distributor of the Yuyama line of automated pharmaceutical equipment. As the world's largest pharmaceutical automation company, Yuyama offers the resources, experience and automation systems to improve safety and to speed up medication dispensing.

Besides its world class line of pharmacy automation equipment for Pharmacies, Hospitals and Long Term Care, Yuyama is praised for having some of the best Technical support and on-site service in the market. Yuyama knows how integral automation can be to the daily pharmacy operation and takes great pride in keeping their systems up and running reliably.

Our pharmacy automation catalog features pouch, vial and blister card filling systems for both small and large pharmacies.

To learn more about our pharmacy systems please visit our 3 automation websites or give us a call.

Versi-Mate™

The Perfect Machine for Automating your Growing Pharmacy

From

Pharmacy Automation Systems

The **Versi-Mate** is a stand alone, barcode driven, table top pharmacy automation machine and uses external canisters to fill the prescription. Unlike most pharmacy automation this system fills vials, unit dose blister cards and multi-dose blister cards. It's small foot print makes it perfect for both small and large pharmacies.

- *Stand-Alone System*
- *No Daily Maintenance*
- *Fits on a Desktop*
- *Quick ROI*
- *Refill "On The Fly"*
- *Simple Touch Screen*

Fills Multi-Dose

Fills Unit-Dose

Fills Vials

Versi-Fill® IIe

The Perfect Machine for Automating your Growing Pharmacy

From

Pharmacy Automation Systems

The Versi-Fill IIe, is a stand alone pharmacy dispensing system that quickly fills vials, unit dose blister cards and multi-dose blister cards. The system holds 60 individual medication canisters and is expandable to 600 canisters. The Versi-Fill IIe will fill over 95% of all of the packaging used in the marketplace today.

- *Adds another layer of safety when dispensing medications*
- *Holds 60 Medication Canisters, Expandable to 600 Canisters*
- *Stand-Alone System, Software Interfacing is not a Requirement*
- *Touch Screen Walks User Through Every Step of the Operation*
- *Rugged Technology that's Easy to Use*

Vials Unit Dose Multi-Dose

Versi-Pack Software

The Perfect Software for Automating your Growing Pharmacy

The Versi-Pack software makes it easy to fill vials, unit dose and multi-dose blister cards and hand filled prescriptions quickly and accurately. The Versi-Pack dispensing software can also be used as a stand alone system for hand filling multi-dose and single dose blister card prescriptions.

Versi-Pack is a revolutionary pharmacy dispensing software that interfaces with Tech-Mate, Versi-Mate and Versi-Fill IIe. Versi-Pack also works perfectly with the CMD-300, our secure automated medication storage and dispensing system. It will keep track of the quantity of medications in each bottle and securely store and deliver those medications to you on demand.

- *Dispensing software that gets the job done fast and accurately*
- *Increase productivity without additional labor*
- *The Versi-Pack software adds another layer of safety when dispensing prescriptions with checks and balances*

BLIENT

Semi-Automatic Blister Pack Solution

Yuyama has finally created a blister pack solution for all blister packs. In the U.S.A, single dose and multi-dose blister packs are being produced by many different manufacturers.

Most manufacturers filling systems will only use that companies specific single dose and multi-dose blister packs but the "Blitent" can adapt and will automate any manufacturers blister cards.

Expandable Number of Canisters, up to 520

Multi-Dose and Single Dose Available

Dual Operation to help to minimize down-time

Blister Card Cold Sealing Machine

Looking for the Perfect Seal for your Cold Seal Blister Cards?

If you're filling cold seal multi-dose blister cards and unit dose blisters cards our cold sealing machine saves you time and always produces the exact amount of pressure for a perfectly sealed blister card.

No more aching hands (repetitive stress injuries) and get the perfect seal every time with the cold sealing machine from Pharmacy Automation Systems.

- *It Perfectly Seals each Card in One Motion*
- *Sealing with a Hand Roller is Time Consuming and Tedious*
- *It's Easily Adjustable for the Thickness of your Card*
- *Just One Pass will Securely Seal your Cold Seal Card*
- *Rubber Suction Feet Assure that it won't Slide During the Seal*
- *It's all Metal Construction will Provide Years of Trouble Free Use*

Quickly Seals Multi-Dose Blister Cards

Perfectly Sealed Unit Dose Cards

Platens

Stock
& Custom

We design and produce a full line of stock and custom made platens for both unit dose and multi-dose blister cards.

Give us your blister card specs and we'll produce the perfect platen to fit your card.

Pucks

A vehicle to transport bottles on a conveyor providing stability, the ability to have the top of different sized bottles at a constant height above the conveyor, and a place to attach an RFID tag.

Canisters

The canisters are used with PAS pill dispensing equipment. The pills are contained in a durable, high impact polycarbonate material and are custom machined for each pill type here in the USA.

Specifications: Pill capacity - 600cc or 1,500cc, Staffing - 0

Semi-Automatic Blister Card Fulfillment (Versi-Fill 2000)

One technician prepares an empty blister card for filling and places it into an infeed queue. The Versi-Fill 2000 will automatically fill the blister card. Another technician will remove the blister cards from the output queue and finish off the card. Feeding and retrieving cards is not a fulltime job so idle time is used to replenish and switch out the canisters. When not at peak demand, one technician can operate the workstation.

Specifications:

- 480 medications (180 active at any one time)
- Single or multidose blister cards - maximum of 2,000 in 8 hours
- Staffing - 2
- Footprint - 20'- 0" x 13'- 0" = 260 sq. ft.

For more information and to watch our videos:
www.pharmacyautomationsystems.com

Semi-Automatic Blister Card Fulfillment (Versi-Fill)

The technician prepares the empty blister card for filling, places it in a platen, and scans the barcode identifying the prescription. A light will be lighted that identifies the slot for the placement of the platen. Once the platen is inserted into the slot, the blisters will be filled (single dose or multidose). While the blister cards are being automatically filled, the technician can prepare another platen or finish off a platen that has already been filled in the Versi-Fill.

Specifications:

- 600 medications (60 active at any one time)
- Unit or multidose blister cards - maximum of 900 in 8 hours
- Staffing - 1
- Footprint - 2'- 6" x 2'- 6" = 6.25 sq. ft.

LITREA III 112VERUC2

The Fully-Automatic Tablet Pouch Packager

From
PAS-yuyama

Litrea III is the perfect solution for small to middle sized pharmacies. Yuyama's fully-automatic pouch filling tablet packager is the newest technological innovation, it's a 2 station Universal Canister solution for increasing brand-to-generic drug changes. 60 pouches per minute and holds 112 canisters.

Let Litrea III help improve your patients' medication compliance.

PROUD DTA STATION & DTA STORAGE

Human error during manual-fills is a very common issue in this industry. To assist with this issue, Yuyama has developed this support system for manual-filling. Users prepare manual medication trays by following the LED lights and on-screen guidance from the connected work station. Users can easily understand where the drugs should be placed. With the Pharmacy Intergrated Software, only prescriptions needing manual fills will be sent to the software separately. The pharmacist then prepares the manual medications in advance. At the same time, the system can print out the list of manually added drugs for added efficiency and improving their overall manual preparation.

Automatic Packaging System

Improved Service & Efficiency through Automation

From
QEM **PAS**
Manufacturing | Machines

Arriving prescription bottles are automatically scanned and placed into a shipping package. The scanning of the first bottle causes the document packet to be printed, the shipping label to be printed on the bag, and the opening of the bag to receive the bottles.

When the document packet has been printed, all the bottles in the order are scanned, the shipping label is scanned, the bottles are inserted into the bag. The bag is then automatically sealed and dropped onto a conveyor to be taken to shipping.

Maximum of 4 Bottles can
be Deposited at a Time

Packages a Max of 3000
Two Bottle Orders in 8hrs

A Footprint of 6' 3" x 3' 3"

For more information and to watch our videos:
www.pasmachines.com

Semi-Automatic Packaging System

When the operator scans the order identifying barcode on the document set the shipping label is automatically printed on the shipping bag. Next, the bag is automatically opened to receive the documents and the medications. Then, the operator inserts the document packet, scans each of the medications and places them into the bag. Finally, the operator pushes a button or a foot pedal to seal the bag so it can be sent to shipping. It is important to note that the bag will only seal if the documents and all of the medications have been correctly scanned.

Specifications: • Medications per bag – 10 • Packages – maximum of 1,600 in 8 hours • Staffing – 1 • Footprint – 5'- 6" x 3'- 6" = 19.25 sq. ft.

From
QEM **PAS**
Manufacturing | Machines

High Density Shipping Sorter

Sorts packages into shipping totes.

Specifications:

- Maximum of 240 sort points (100 shown here)
- Packages – maximum of 7,000 in 8 hours
- Staffing – 1
- Footprint (100 sort points) - 70'- 0" x 6'- 0" = 420 sq. ft.

Automatic Pill Dispensing (Lightning Pick)

A fully automatic work station that dispenses medication into arriving bottles in pucks.

Specifications:

- 10 medications active at any one time.
- Prescriptions – maximum of 10,000 in 8 hours
- Staffing – 0
- Footprint - 10'- 0" x 3'- 6" = 35 sq. ft.

Semi-Automatic Pill Dispensing (EV54-1)

Labeled empty bottles arrive in pucks. As pucks enter the queue of empty bottles, the appropriate pill counter dispenses the prescription. Once the empty bottle reaches the technician, at the head of the queue, it is removed from the puck and scanned. This causes a light adjacent to the pre-counted medication to be lighted. The technician then retrieves the pills, scans the patient barcode on the bottle, places the filled prescription into the puck and pushes the puck back out onto the conveyor.

Specifications:

- 54 medications
- Prescriptions maximum of 1,700 in 8 hours
- Staffing – 1
- Footprint - 6'- 6" x 2'- 6" = 16.25 sq. ft.
